3. Create Wireframes & Mockups

- Sketch initial wireframes for layouts and interfaces.

- Use tools like **Figma** or **Adobe XD** for digital mockups.

- Ensure designs are user-friendly and visually appealing.

Creating wireframes and mockups is a critical step to visually design how the app will look and function for each persona. I'll break it down into key steps, focusing on the screens that correspond to each user journey and showcasing the essential components.

Step 3: Create Wireframes and Mockups

1. User Interface (UI) Layout:

Home Dashboard:

- **Main Sections:**

  - **Personal Dashboard:** A quick overview for tracking personal items, reminders, and family responsibilities.

  - **Business Dashboard:** Focus on business-related tasks (accounting, inventory).

  - **Projects/Development Dashboard:** For coding tasks, bug tracking, and micro-SaaS project management.

Wireframe for the Home Dashboard:

- **Header:**

  - Logo and app name.

  - Quick navigation icons (e.g., Profile, Settings, Search).

- **Main Menu (Tabs):**

- Personal
  - Business
  - Projects
  - Family
- **Widgets:**
  - **Recent Activities:** Quick links to recent files accessed or family tasks completed.
  - **Reminders/Tasks:** A section for overdue tasks and upcoming reminders.
  - **Analytics Overview:** Key statistics like monthly profit, tasks completed, or coding progress.

Mockup 1: Home Dashboard (All Personas)

- **Personal Section**:
  - Tiles showing **"Items to Declutter," "File Management,"** and **"Recent Purchases."**
  - Buttons for adding items (e.g., "Add Family Task," "Scan Document").
- **Business Section**:
  - **Sales Summary** and **Expenses Tracking**.
  - Button for **"Log Transaction"** and **"Generate Report."**
- **Projects Section**:
  - **Current Task/Progress Bar** and links to **GitHub Repo**.
  - Add buttons for coding tasks, bugs, and version control.
- **Family Section**:
  - Overview of **Family Responsibilities** (e.g., "Pay bills," "Schedule checkup").
  - Ability to add tasks and reminders.

Wireframe for Add Item Page:

- **Item Categories:**
  - Dropdown menu to select a category (e.g., Books, Gadgets, Documents).
- **Item Details:**
  - Fields for **Item Name**, **Description**, **Storage Location**, and **Condition**.
  - Attach **Images** and **QR Code** (for physical items).
  - Option to add tags like "Expiring Soon" or "Urgent."

Mockup 2: Add Item Screen

- Large **input fields** for item name, description, and storage location (e.g., "Living Room Shelf," "External HDD").
- **Buttons** for attaching an image or scanning a QR code.
- **Dropdown lists** for categories (Clothes, Gadgets, Documents, etc.).
- **Save and Cancel** buttons at the bottom.

Wireframe for Business Dashboard:

- **Main Section**:
  - **Profit/Loss overview** with graph visuals (Bar, Pie chart).
  - **Recent Transactions** in a scrollable list.
  - Button for **"Log New Transaction."**
- **Subsections:**
  - **Task/Reminder List:** A simple list of actions for business (e.g., "File tax return," "Pay Vendor").

Mockup 3: Business Dashboard

- **Left Sidebar** for quick navigation (Accounting, Inventory, Transactions).
- **Central Panel** displaying the profit/loss visual with breakdown by months.

- **Quick Action Bar** at the top for logging transactions and expenses.
- **Notification** icon on the top bar for reminders (e.g., tax filing deadlines).

Wireframe for Task/Reminder Screen:

- **Main Panel**:
  - A list of **tasks/reminders** (business, family, personal).
  - Task filters (e.g., *Today*, *Overdue*, *Upcoming*).
- **Details**:
  - **Task Name**, **Due Date**, **Priority Level**, **Status**.
  - Button to **"Mark as Done"** or **"Edit."**

Mockup 4: Task Screen

- **Tabbed Navigation** for filtering tasks by category.
- **Task cards** with actionable buttons (e.g., "Complete Task," "Set New Task").
- Color-coded reminders based on urgency (e.g., red for overdue, yellow for upcoming).

Wireframe for Project Dashboard (Micro-SaaS Tasks):

- **Main View**:
  - A list of **active projects**, **bugs to fix**, **upcoming coding tasks**.
  - A code editor window embedded within the app for quick fixes.
- **Task Management**:
  - Tasks can be marked as **"In Progress," "Completed,"** or **"On Hold."**
- **Code Repository Integration**:
  - Links to GitHub/Bitbucket for repository management.

Mockup 5: Project Dashboard (Micro-SaaS)

- **Central Workspace** for live code editing and task management.

- **Live Progress Bar** for ongoing coding tasks.

- **Bug Tracker** section with priority settings.

- **Pull Requests** button for seamless integration with repositories.

Wireframe for Family Dashboard:

- **Task List:**

  - A **family-centric task list**: "Take Mom to the doctor," "Schedule a family meeting," "Pay Utility Bills."

  - The option to mark tasks as **"Completed"** or **"Set Reminder."**

- **Calendar View**:

  - Family events displayed in a monthly view (e.g., Birthdays, Health Checkups).

Mockup 6: Family Dashboard

- **Main Section** showing **upcoming family events** and **tasks to be completed**.

- **"Set Reminder"** button for scheduling and managing family events.

- **Icons** to signify important tasks (e.g., red icon for bills, green for appointments).
